

**ABSTRACT**

Disclosed is a door (2) comprising a door leaf (1) and a door operator (10) for motorized operation of the door leaf (1) as well as an ID controlling and actuating means (12, 52) for mounting outside from the zone to be closed off, by means of which following or during implementation of an ID check an authorized user can enable the door operator (10) for the purpose of opening the door (2). Preferably to save, in an easy way time, material and money it is proposed in accordance with the invention to mount the ID controlling and actuating means (12, 52) on or in the door leaf (1) for movement therewith. In addition, the invention relates to a method of fabricating, furnishing and/or fitting such a door (2).
